Email: a23126514019.eee@gmail.com

Cosmetics Insights

1.Introduction

1.1 Project Overview

The Cosmetics Insights Dashboard is an interactive data visualization project developed using Tableau. It analyzes cosmetics product data to provide meaningful insights into brands, categories, prices, ratings, and skin-type suitability. The dashboard helps users explore the data through interactive charts, filters, and KPIs, making it easier to understand market trends and support better decision-making.

1.2 Purpose

The purpose of this project is to transform raw cosmetics data into meaningful visual insights. It helps businesses and customers analyze product information, compare brands, identify trends, and make informed decisions using an interactive Tableau dashboard.

2.Ideation Phase

2.1 Problem Statement

Before starting the project, it was important to understand the problems faced by different users in the cosmetics industry. A sales manager needs an easier way to analyze sales performance, while customers want a simple way to compare products and choose the ones that best match their needs. However, the available information is often scattered and difficult to understand, making decision-making time-consuming. These problem statements helped us clearly identify the users' needs and guided the development of the Cosmetics Insights Dashboard in Tableau, which provides interactive visualizations and meaningful insights for better and faster decision-making.

2.2 Empathy Map Canvas

To build a useful and user-friendly solution, it is important to understand the people who will use it. The empathy map was created to identify the needs, challenges, thoughts, and expectations of a cosmetics sales manager. By looking at the problem from the user's perspective, we gained a better understanding of the difficulties involved in analyzing sales data and making business decisions. These insights helped us design the Cosmetics Insights Dashboard with interactive visualizations that simplify data analysis and support faster, more informed decision-making

2.3 Brainstorming

Brainstorming helped our team generate different ideas to solve the identified problem. We discussed the challenges faced in analyzing cosmetics sales data and explored multiple solutions. After evaluating each idea based on its feasibility, usefulness, and impact, we selected the most suitable approach. This process helped us finalize the development of an interactive **Cosmetics Insights Dashboard** using Tableau to provide meaningful visualizations and support better business decisions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-3: Idea Prioritization

The customer journey map illustrates the complete experience of a sales manager while using the **Cosmetics Insights Dashboard**. It captures the user's goals, interactions, positive experiences, challenges, and opportunities for improvement at each stage. Understanding this journey helped in designing a dashboard that is intuitive, interactive, and capable of providing valuable business insights for faster and more effective decision-making.

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Dashboard Access	Open the Tableau dashboard. Load the cosmetics sales dataset. Display the main dashboard with key business metrics.
FR-2	Sales Analysis	View total sales and profit. Analyze sales trends over different time periods. Compare sales across different regions.
FR-3	Product Analysis	View product categories. Identify the best-selling and least-selling products. Compare product performance.
FR-4	Customer Insights	Understand customer purchasing patterns. Analyze customer segments. Identify customer preferences based on sales data.
FR-5	Interactive Dashboard	Apply filters for products, categories, and regions. Update charts instantly based on the selected filters. Explore data through interactive visualizations.
FR-6	Reports & Story	Display dashboards and KPIs. Present business insights using Tableau Story. Share or export dashboard reports when needed.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard should be simple to navigate so that users can understand the data without difficulty.
NFR-2	Security	The dashboard should ensure that the dataset remains secure and is accessed only through authorized Tableau platforms without altering the original data.
NFR-3	Reliability	The dashboard should display accurate and consistent information based on the available dataset.
NFR-4	Performance	The dashboard should load quickly and respond smoothly when filters or charts are used.
NFR-5	Availability	The dashboard should be accessible through Tableau Public whenever an internet connection is available.

NFR-6	Scalability	The dashboard should allow new data and additional visualizations to be added in the future.
-------	-------------	--

3.3 Data Flow Diagrams

The Data Flow Diagram (DFD) illustrates how data moves through the **Cosmetics Insights Dashboard**. Sales data is collected, cleaned, and processed before being visualized in Tableau. The dashboard presents interactive charts and key performance indicators that help users analyze sales, product performance, regional trends, and customer insights. The processed information supports informed business decisions and improves overall reporting efficiency.

DFD(LEVEL 0) CONTEXT DIAGRAM

DFD(LEVEL 2) DASHBOARD ANALYSIS

User Stories

User stories describe the key features of the Cosmetics Insights Dashboard from the user's perspective. They help define user needs, expected functionality, and guide the development of the dashboard.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer	Product Search	USN-1	As a customer, I want to explore different cosmetic products so that I can find products that suit my needs.	The dashboard displays product details and categories clearly.	High	Sprint-1
Business Owner	Dashboard Reports	USN-2	As a Business Owner, I want to view overall business performance so that I can make informed business decisions.	Dashboard shows overall KPIs and business reports.	High	Sprint-1
Management Team	Report Sharing	USN-3	As a Management Team member, I want to review dashboard reports so that I can monitor business growth and performance.	Reports can be viewed and shared easily.	Medium	Sprint-2
Customer	Product Comparison	USN-4	As a customer, I want to compare products based on category and price so that I can make the right choice.	Product comparison is available through interactive visualizations.	High	Sprint-1

3.4 Technology Stack

Technical Architecture:

The project is designed to convert raw cosmetics data into meaningful insights. The dataset is first cleaned and organized using Microsoft Excel, then imported into Tableau Desktop to create interactive charts, dashboards, and stories. Finally, the completed dashboard is published on Tableau Public, allowing users to explore the data easily through filters and visualizations.

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Interactive Dashboard for users	Tableau Dashboard
2.	Application Logic-1	Data Cleaning and Transformation	Microsoft Excel
3.	Application Logic-2	Data Visualization	Tableau Desktop
4.	Application Logic-3	Business Insights & Story Creation	Tableau Story
5.	Database	Cosmetics Dataset	CSV Dataset
6.	Cloud Database	Published Dashboard	Tableau Public Cloud
7.	File Storage	Dataset & Workbook Storage	Local System (.csv)
8.	External API-1	Not Used	N/A

9.	External API-2	Not Used	N/A
10	Machine Learning Model	Not Used	N/A
11	Infrastructure (Server / Cloud)	Dashboard hosted online	Tableau Public Cloud

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Visualization platform and Excel preprocessing	Tableau Public, Microsoft Excel
2.	Security Implementations	Public dashboard with secure Tableau hosting	Tableau Public Authentication
3.	Scalable Architecture	Dashboard supports additional datasets and worksheets	Tableau Dashboard Architecture
4.	Availability	Accessible anytime through Tableau Public	Cloud Deployment
5.	Performance	Optimized using filters, calculated fields, and efficient visualizations	Tableau Optimization

4. Project Design Phase

4.1 Problem Solution Fit

The Problem–Solution Fit explains how the project addresses a real customer problem with a practical solution. In this project, the Cosmetics Insights Dashboard helps users easily analyze cosmetic products, compare brands, and understand market trends through interactive visualizations, making data-driven decisions faster and simpler.

Purpose

- Solve customer problems using meaningful data insights.
- Help users make faster and better decisions.
- Present information in a simple and interactive way.
- Improve understanding of customer preferences and market trends.
- Support businesses in making informed, data-driven decisions.

Template:

Problem-Solution fit canvas 2.0
Purpose / Vision

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? I.e. working parents of 0-5 y.o. kids Cosmetic brands, retailers, beauty product sellers, marketing teams, business analysts, and customers looking for suitable cosmetic products.	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices. Large datasets, limited analytical skills, difficulty comparing products, and time required to generate meaningful insights manually.	5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking Excel reports, manual data analysis, basic charts, and online product listings. These methods provide limited interactivity and make trend analysis time-consuming.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. Analyze cosmetic product data, compare brands and categories, understand customer preferences, identify market trends, and support better business decisions.	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations. Cosmetics data is spread across multiple sources and is difficult to analyze manually, making it challenging to identify customer preferences and market trends.	7. BEHAVIOUR What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (I.e. Greenpeace) Users search for products based on brand, category, price, rating, and skin type. They compare products and look for visual summaries before making decisions.	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Increasing demand for beauty products, growth of online shopping, need for market analysis, and the availability of large amounts of cosmetics data.	10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. Develop an interactive Tableau dashboard that organizes cosmetics data into clear visualizations with filters, KPIs, and a story. This enables users to quickly explore trends, compare products, and make data-driven decisions.	8. CHANNELS of BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Online: Tableau Public Dashboard, websites, e-commerce platforms, social media.	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure > confident, in control - use it in your communication strategy & design. Confused by scattered data and difficult comparisons. After: Confident in understanding product trends and making informed decisions using clear visualizations.		8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Offline: Cosmetic stores, supermarkets, beauty exhibitions, and customer surveys.

4.2 Proposed Solution

The proposed solution is an interactive Tableau dashboard that transforms raw cosmetics data into clear and meaningful visualizations. It helps users analyze products, compare brands, identify trends, and make informed decisions quickly through an easy-to-use interface.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Analyzing cosmetics data manually is time-consuming and makes it difficult to identify product trends and customer preferences.
2.	Idea / Solution description	Develop an interactive Tableau dashboard that visualizes cosmetics data using charts, filters, KPIs, and stories for easy analysis.
3.	Novelty / Uniqueness	Combines multiple cosmetic insights into one interactive dashboard, making analysis simple, fast, and user-friendly.
4.	Social Impact / Customer Satisfaction	Helps businesses understand market trends and enables customers to make better product choices.

5.	Business Model (Revenue Model)	Can be used by cosmetic companies through dashboard subscriptions, business analytics services, or customized reporting solutions.
6.	Scalability of the Solution	The dashboard can easily be updated with new datasets, products, brands, and additional analytics as business needs grow

4.3 Solution Architecture

The solution architecture explains how cosmetics data is collected, processed, and transformed into meaningful insights. The dataset is first cleaned and prepared in Microsoft Excel, then imported into Tableau Desktop for analysis. Interactive dashboards and stories are created using charts, filters, and KPIs. Finally, the completed dashboard is published on Tableau Public, allowing users to explore cosmetic trends, compare products, and make informed decisions through an easy-to-use interface.

Solution Architecture Diagram:

5. Project Planning & Scheduling

5.1 Project Planning

Product Backlog, Sprint Schedule, and Estimation

The project work is divided into small tasks and planned across multiple sprints. Each task is assigned a priority and story points to estimate the effort required, helping the team complete the project in an organized and efficient way.

Sprint	Functional Requirement	User Story No.	User Story / Task	Story Points	Priority
Sprint-1	Data Collection	USN-1	Collect cosmetics dataset.	2	High
Sprint-1	Data Cleaning	USN-2	Clean and prepare dataset.	3	High
Sprint-1	Data Import	USN-3	Import dataset into Tableau.	2	High
Sprint-2	Dashboard Design	USN-4	Create interactive dashboard.	4	High
Sprint-2	KPIs	USN-5	Create KPI cards.	2	Medium
Sprint-2	Filters	USN-6	Add interactive filters.	3	High
Sprint-3	Story	USN-7	Create Tableau story.	3	High
Sprint-3	Testing	USN-8	Test dashboard.	2	Medium
Sprint-4	Publishing	USN-9	Publish on Tableau Public.	2	High
Sprint-4	Documentation	USN-10	Prepare report.	2	Medium

Project Tracker, Velocity & Burndown Chart

The project tracker records the progress of each sprint by monitoring planned tasks, completed work, sprint duration, and release dates. It helps ensure the project stays on schedule.

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	7	5 Days	01 Jul 2026	05 Jun 2026	7	05 Jun 2026
Sprint-2	9	5 Days	06 Jul 2026	10 Jun 2026	9	10 Jun 2026
Sprint-3	5	5 Days	11 Jul 2026	15 Jun 2026	5	15 Jun 2026

Sprint-4	4	5 Days	16 Jul 2026	20 Jun 2026	4	20 Jun 2026
----------	---	--------	-------------	-------------	---	-------------

Velocity:

Velocity measures the amount of work completed in each sprint using story points. It helps estimate the team's productivity and supports better planning for future sprints.

Total Story Points: 25

Number of Sprints: 4

Average Velocity: $25 \div 4 = 6.25$ Story Points per Sprint

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

6.Functional and Performance Testing

6.1 Performance Testing

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The cosmetics dataset was successfully imported into Tableau. All product details, including brand, category, price, rating, and skin type, were displayed accurately in the dashboard.
2.	Data Preprocessing	Removed duplicate records, handled missing values, corrected data formats, verified data types, and created calculated fields before developing the dashboard.
3.	Utilization of Filters	Filters such as Brand, Category, Skin Type , and Price Range were used to allow users to interactively explore and analyze the data.
4.	Calculation fields Used	Created calculated fields for KPIs such as Average Rating, Average Price, Product Count , and other required measures for analysis.
5.	Dashboard design	No of Visualizations / Graphs - 8
6	Story Design	No of Visualizations / Graphs - 6

Dashboard

The **Cosmetics Insights Dashboard** is an interactive visualization developed using Tableau to analyze cosmetics product data. It presents key information such as product categories, brands, prices, ratings, and skin-type suitability through easy-to-understand charts and filters. The dashboard allows users to explore the data from different perspectives, compare products, and identify important trends. Its interactive design helps businesses and customers make informed decisions quickly and efficiently.

Cosmetics Insights Dashboard

Tableau public link (Dashboard)

https://public.tableau.com/views/CosmeticsInsightsDashboard_17829196450180/Dashboard1?:language=en-GB&:sid=&:redirect=auth&:display_count=n&:origin=viz_share_link

Story

The **Cosmetics Insights Story** combines multiple dashboard views into a logical sequence to present meaningful business insights. Each story point highlights a specific aspect of the data, such as brand performance, category distribution, product ratings, price analysis, and skin-type preferences. By guiding users through these insights step by step, the story makes it easier to understand patterns, identify opportunities, and draw conclusions that support better business decisions.

Tableau public link (Story)

8. Advantages & Disadvantages

Advantages

- Interactive and easy-to-use dashboard.
- Simplifies analysis of cosmetics data.
- Helps compare brands, prices, ratings, and categories.
- Supports better business and customer decision-making.
- Provides clear visual insights using charts and filters.
- Can be updated with new datasets easily.

Disadvantages

- Depends on the quality of the input dataset.
- Limited to the available data and cannot predict future trends.
- Tableau Public dashboards require an internet connection.
- Advanced customization may require Tableau expertise.

9. Conclusion

The Cosmetics Insights Dashboard successfully transforms raw cosmetics data into interactive and meaningful visualizations. It enables users to analyze product performance, compare brands, explore market trends, and gain valuable business insights. The project demonstrates how Tableau can simplify data analysis and support data-driven decision-making through an intuitive and user-friendly dashboard.

10. Future Scope

- Integrate live cosmetics sales data for real-time analysis.
- Add customer reviews and sentiment analysis.
- Include AI-based product recommendations.
- Develop sales forecasting using machine learning.
- Create a mobile-friendly version of the dashboard.
- Connect the dashboard with cloud databases for automatic updates.
